

Children colour the three thermometers to reflect the temperature around school.

They complete the stem sentences to match the temperatures that they recorded.

False. The red lines go up to the same position but the scales are different. A has intervals representing half a degree. B has intervals representing one degree. A shows 9°C . B shows 8°C .

London - 8°C

Edinburgh - 3°C

Cardiff - 7°C

London is 1°C warmer than Cardiff.

The temperature in Belfast could be 4°C , 5°C , 6°C or 7°C .

Accept any sensible suggestions that children give a reason for. For example, they might say December because it is a cold month.
